

# Algal blooms reduce the uptake of toxic methylmercury in freshwater food webs

Paul C. Pickhardt, Carol L. Folt, Celia Y. Chen, Bjoern  
Klaue, and Joel D. Blum

# Outline

- Intro to Hg, cycling, toxicity
- Hg in Nevada
- Hypothesis
- Design
- Results
- Discussion

# Mercury (Hg)

-Hydrargyrum, Latin for “silver water”

-liquid at standard temperature and pressure

-Historical uses include medicine, paint, and gold extraction (still practiced in artisanal gold mines)

# Form Determines Toxicity and Behavior

## Form

Elemental Hg: liquid vs gaseous

Inorganic Hg: (HgII) bound to Cl, S, O

Organic Hg: Methylmercury (MeHg)

## Toxicology

Liquid: the least bioavailable, absorption through the skin or intestines is low

Gaseous: readily absorbed in the lungs, can cross the blood-brain barrier (Mad Hatter's)

Oxidized Hg: more reactive, binds to thiol groups on proteins, inhibits enzyme activity but does not cross the blood-brain-barrier

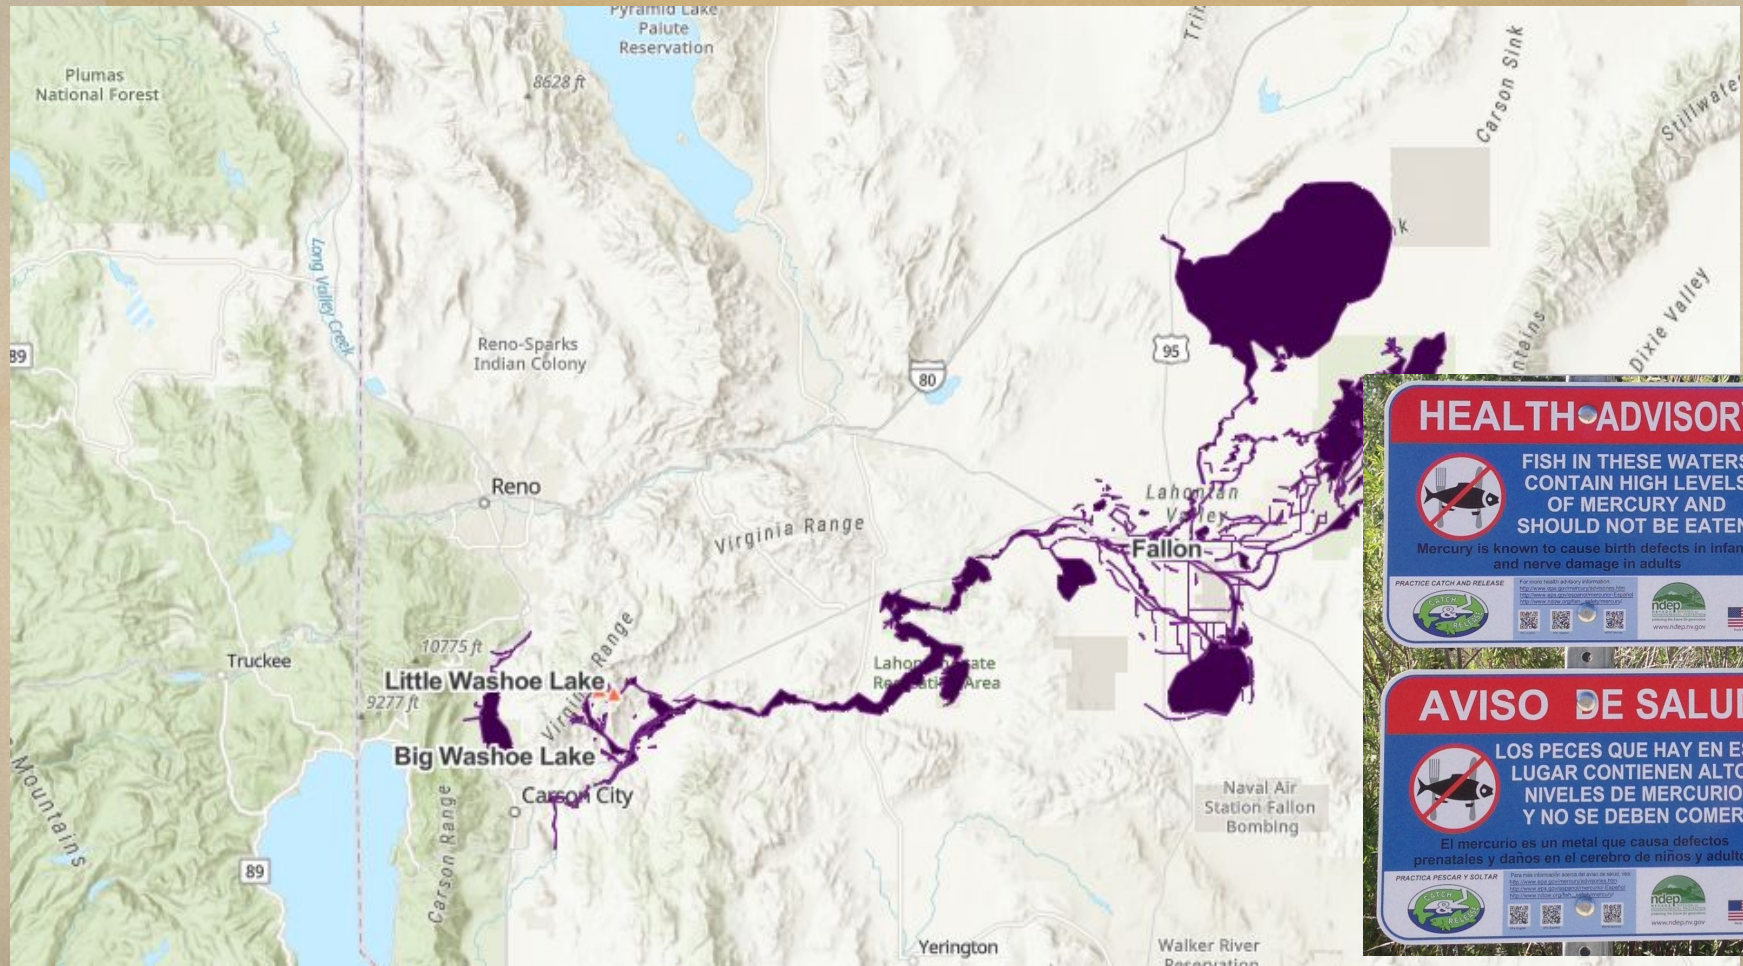

Organic Hg is the most toxic, accumulates in brain tissue (Minamata Disease)

Outridge, Peter M., et al. "Updated global and oceanic mercury budgets for the United Nations Global Mercury Assessment 2018." *Environmental science & technology* 52.20 (2018): 11466-11477.

# Hg in Nevada-Carson River Superfund Site

**HEALTH ADVISORY**

 **FISH IN THESE WATERS CONTAIN HIGH LEVELS OF MERCURY AND SHOULD NOT BE EATEN**

Mercury is known to cause birth defects in infants and nerve damage in adults

**PRACTICE CATCH AND RELEASE**

For more health advisory information:  
<http://www.ndep.gov/mercury>  
<http://www.ndep.gov/mercury>  
<http://www.ndep.gov/mercury>

**AVISO DE SALUD**

 **LOS PECES QUE HAY EN ESTE LUGAR CONTIENEN ALTOS NIVELES DE MERCURIO Y NO SE DEBEN COMER**

El mercurio es un metal que causa defectos prenatales y daños en el cerebro de niños y adultos

**PRACTICA PESCAR Y SOLTAR**

Para más información acerca del agua de Nevada:  
<http://www.ndep.gov/mercury>  
<http://www.ndep.gov/mercury>  
<http://www.ndep.gov/mercury>

# Keywords

- Zooplankton
- Trophic level
- Oligotrophic, mesotrophic
- Eutrophication
- Biodilution (cell-specific Hg) vs bloom dilution (total conc Hg/total number of cells)

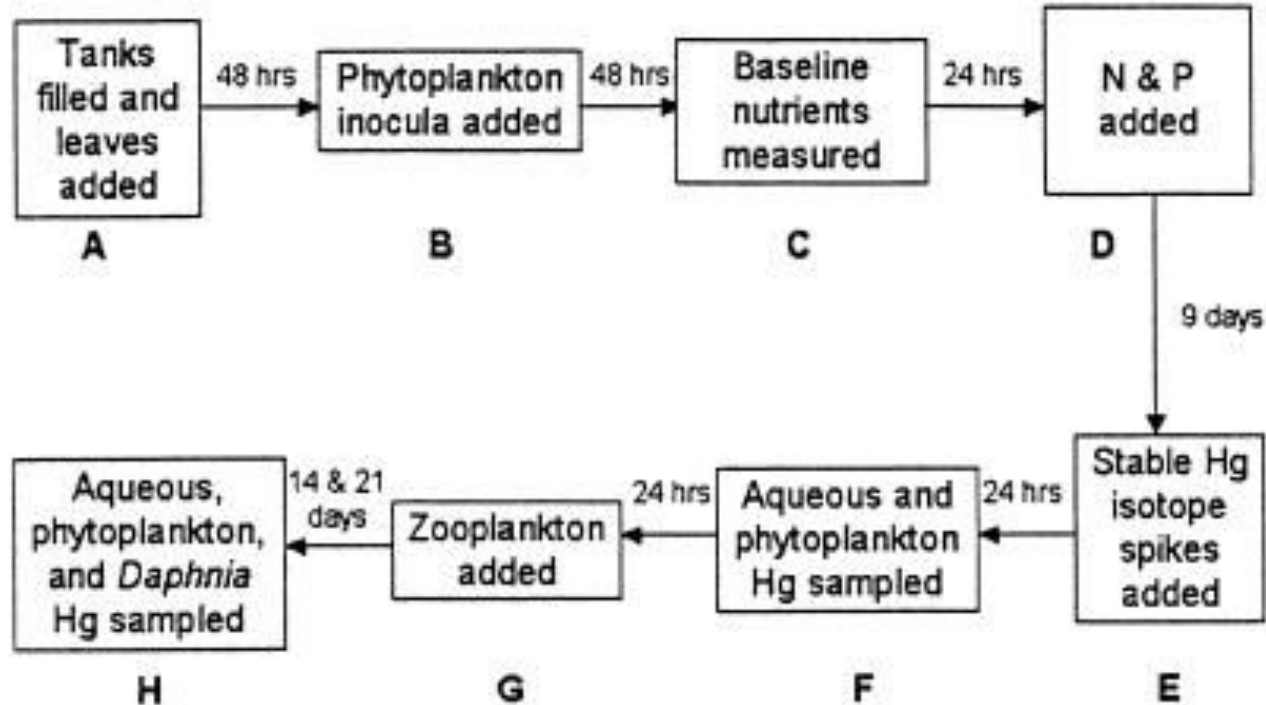

Water flea (Daphnia)

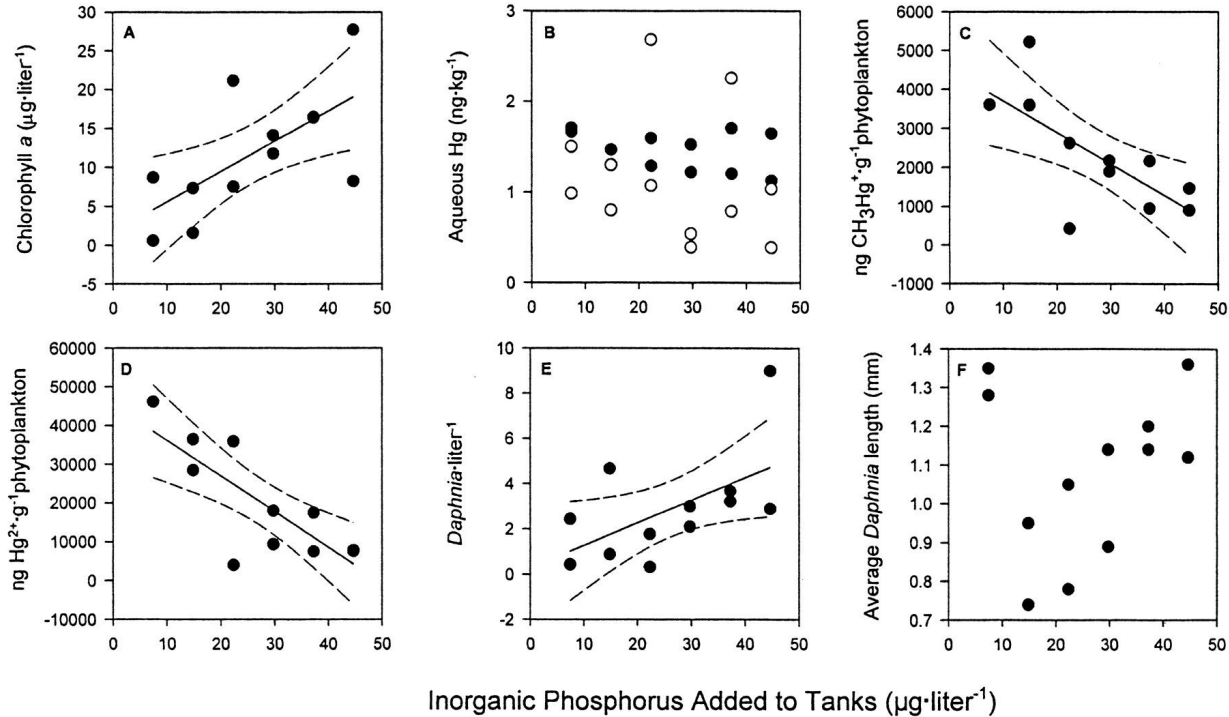

MarekMis, 2019, accessed 02/03/21. [https://commons.wikimedia.org/wiki/File:Rodz%C4%85ca\\_dafnia.jpg](https://commons.wikimedia.org/wiki/File:Rodz%C4%85ca_dafnia.jpg)

Hypothesis:  
Increasing algal  
biomass reduces  
MeHg accumulation in  
food webs (bloom  
dilution)

# Experimental Design

# Results – a story in two parts

# Results- a story in two parts

2 weeks

3 weeks

Inorganic Phosphorus Added to Tanks (µg·liter<sup>-1</sup>)

- Bloom dilution was observed at time of spike addition
- No difference in uptake of Hg(II) in Daphnia with increasing algae concentrations
- A decreasing trend in MeHg (ng MeHg/g Daphnia)

# Questions?

Updates since publication:

- many organisms in many environments can methylate Hg
- rice is also an important pathway for Hg exposure

What did you find most interesting?

Do you agree with the findings?

Any factors/ environmental conditions you would include?
